

Are your instruments really clean?

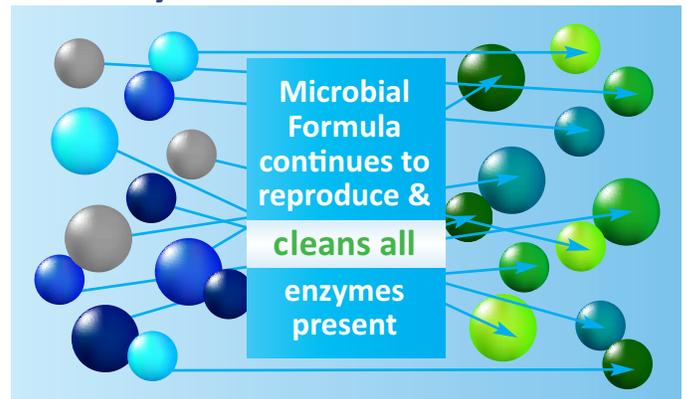

Be sure. Use Pro One Sonic Tabs.

Old Technology: Enzyme Based Tablets

Enzymes are non-reproductive and are expended as they clean waste. Because of this, enzyme based cleaners may lose effectiveness over time. Also, enzymes aren't capable of recognizing and cleaning multiple different waste products. For instance, protease is only effective to clean protein based waste, amylase only cleans starch based waste.

New Technology - Pro One Sonic Tabs: Bio-enzymatic Based Tablets

POS64 is a microbial formula (not an enzyme formula) composed of bacteria strains of living organisms. Once they are added to the ultrasonic machine or drain, the bacteria respond to organic buildup in their environment and start producing the enzymes needed to clean and deodorize the instruments and material. These enzyme factories will actively identify waste and continually produce like enzymes (protease, amylase, lipase, cellulase, etc.).

In addition, Pro One Sonic Tabs offers benefits that the other brands do not:

- Anti-Rust Properties
- Hard Water Mineralization
- Stronger Fresh Mint Scent
- Eco Friendly
